REGARDING RAL COLOURS

Sika's colour production system offers the ultimate flexibility in colour selection: an unlimited choice of colours offered through the Classic RAL Fan, or by supplying Sika with a swatch or substrate sample for colour-matching.

Moreover, no minimum quantities are required for Sikafloor®-261^{CA}, Sikagard®-381, Sikagard® Duroplast®-100 N and Sikafloor® Fastflor® CR and the production time is greatly reduced!

- All colours shown are as accurate as printing methods and computer display screens permit.
- Results may differ due to variances in application technique and gloss levels may vary depending upon product used.
- Final colour selections should be made based upon actual samples.
- Please consult a Sika Technical Sales Representative for detailed advice.
